sequence search request for 10/001,844

Hello,

I need a length limited nucleotide sequence search performed on SEQ ID NO:3 (1576 nt long) in the above entitled case, where the maximum size of the returned hit is no longer than 50 nucleotides. Thank you very much,

Doug Schultz

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention relates to hedgehog fusion proteins. Hedgehog comproteins are a family of extracellular signalling proteins that regulate various aspects of embryonic development both in vertebrates and in convertebrates. Hedgehog fusion protein is useful for the prophylaxis or continuent of any condition or disease states for which a hedgehog or constituents or conditions of disease states in biological system or constituents or conditions of disease states in biological systems. CC specimens and for diagnostic purposes in non-physiological systems. CC Hedgehog fusion protein is useful for treating neurological conditions. CC Hedgehog fusion protein is useful for treating neurological conditions. CC Hedgehog fusion protein is useful for treating neurological conditions. CC parkinson's disease, Huntington's chorea, amylotropic lateral sclerosis CC parkinson's disease, Huntington's chorea, amylotropic lateral sclerosis and chronic immunological diseases of nervous system including multiple cc sclerosis and malignant gliomas, medulloblastomas, neuroectodermal CC tumours which express the receptor for the protein. The present sequence is human oligonucleotide HOG-403 used to construct pKS288, pKS288, pKS310, pKS287 pKS300 and pKS289 plasmids which are used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated hedgehog fusion polypeptide useful for treating neurological conditions such as Alzheimer's disease, Parkinson's disease, Huntington's chorea, amylotropic lateral sclerosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (BIOJ ) BIOGEN INC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to hedgehog fusion proteins. Hedgehog CC proteins are a family of extracellular signalling proteins that regulate various aspects of embryonic development both in vertebrates and in CC invertebrates. Hedgehog fusion protein is useful for the prophylaxis or patched protein constituent is efficacious and in the diagnosis of CC constituents or conditions of disease state for which a hedgehog or CC specimens and for diagnostic purposes in biological system or CC specimens and for diagnostic purposes in non-physiological system or CC the diagnostic purposes in non-physiological systems. CC due to injury, aging of nervous system, including Alzheimer's disease, CC chronic neurodegenerative diseases of the nervous system, including Parkinson's disease, Huntington's chorea, amylotropic lateral sclerosis and chronic immunological diseases of nervous system including multiple CC and chronic immunological diseases of nervous system including multiple collections and to specifically target medical therapies against cancers and tumours which express the receptor for the protein. The present sequence is human oligonucleotide HOG-803 used to construct pMMC22 plasmid which is wead in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                              The present invention relates to hedgehog fusion proteins. Hedgehog CC proteins are a family of extracellular signalling proteins that regulate CC various aspects of embryonic development both in vertebrates and in CC invertebrates. Hedgehog fusion protein is useful for the prophylaxis or CC patched protein constituent is efficacious and in the diagnosis of CC constituents or conditions of disease states in biological system or CC specimens and for diagnostic purposes in non-physiological systems. CC Hedgehog fusion protein is useful for treating neurological systems. CC Hedgehog fusion protein is useful for treating neurological conditions can be considered by the conditions of the nervous system, including CC chronic neurodegenerative diseases of the nervous system, including CC and chronic immunological diseases of the nervous system including multiple CC and chronic immunological diseases of nervous system including multiple CC and chronic immunological diseases of nervous system including multiple CC sclerosis and malignant gliomas, medulloblastomas, neuroectodermal CC tumours and to specifically target medical therapies against cancers and CC is human oligonucleotide HOG-804 used to construct pMMC23 plasmid which cc is used in the invention

Novel isolated hedgehog fusion polypeptide useful for treating

Example 1; Page 61; 178pp; English.

```
Creates are a family of extracellular signalling proteins. Hedgehog compreteins are a family of extracellular signalling proteins that regulate convertebrates and in the convertebrates and in the convertebrates and in the convertebrates. Hedgehog fusion protein is useful for the prophylaxis or convertebrates. Hedgehog fusion protein is useful for the prophylaxis or convertebrates and in the diagnosis of constituents or conditions of disease state for which a hedgehog or constituents or conditions of disease states in biological system or specimens and for diagnostic purposes in non-physiological systems. Created the conjucy, aging of nervous system, including Alzheimer's disease, concilence of injury, aging of nervous system, including Alzheimer's disease, control neurodegenerative diseases of the nervous system including multiple conditions is disease, Huntington's chorea, amylotropic lateral sclerosis and chronic immunological diseases of nervous system including multiple colleges and including and protein system including multiple colleges and malignant gliomas, medulationas, neuroectodermal conditions which express the receptor for the protein. The present sequence is human oligonucleotide HOG-807 used to construct pMMC26 plasmid which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δÃ

The present invention relates to hedgehog fusion proteins. Hedgehog CC proteins are a family of extracellular signalling proteins that regulate CC various aspects of embryonic development both in vertebrates and in CC invertebrates. Hedgehog fusion protein is useful for the prophylaxis or CC treatment of any condition or disease state for which a hedgehog or CC patched protein constituent is efficacious and in the diagnosis of CC constituents or conditions of disease states in biological systems or CC specimens and for diagnostic purposes in non-physiological systems. CC Hedgehog fusion protein is useful for treating neurological conditions CC the constituent of the conditions of disease, including Alzheimer's disease, CC due to injury, aging of nervous system, including alzheimer's disease, CC constituent diseases of the nervous system including parkinson's disease, Huntington's chorea, amylotropic lateral sclerosis and chronic immunological diseases of nervous system including multiple sclerosis and malignant gliomas, medulloblastomas, neuroectodermal CC sclerosis and malignant gliomas, medulloblastomas, neuroectodermal tumours and to specifically target medical therapies against cancers and the shuman oligonucleotide HOG-789 used to construct pMMC22 plasmid which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             99999999999999999988
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC The present invention relates to hedgehog fusion proteins. Hedgehog CC proteins are a family of extracellular signalling proteins that regulate CC various aspects of embryonic development both in vertebrates and in CC invertebrates. Hedgehog fusion protein is useful for the prophylaxis or CC treatment of any condition or disease state for which a hedgehog or CC patched protein constituent is efficacious and in the diagnosis of CC constituents or conditions of disease states in biological system or CC specimens and for diagnostic purposes in non-physiological systems. CC Hedgehog fusion protein is useful for treating neurological conditions CC due to injury, aging of nervous system, including Alzheimer's disease, CC chronic neurodegenerative diseases of the nervous system, including CC and chronic immunological diseases of the nervous system, including multiple CC arkinson's disease, Huntington's chorea, amylotropic lateral sclerosis CC and chronic immunological diseases of nervous system including multiple CC sclerosis and malignant gliomas, medulloblastomas, neuroectodermal CC tumours which express the receptor for the protein. The present sequence CC is human oligonucleotide HOG-791 used to construct pMMC23 plasmid which cross read in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                       Novel isolated hedgehog fusion polypeptide useful for treating neurological conditions such as Alzheimer's disease, Parkinson's
multiple sclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             nervous system aging; neurodegenerative disease; immunological disease; malignant glioma; medulloblastoma; neuroectodermal tumour; cancer; extracellular signalling protein; HOG-799; ss.

밁

proteins are a family of extracellular signalling proteins that regvarious aspects of embryonic development both in vertebrates and in The present invention relates to hedgehog fusion proteins. Hedgehog proteins are a family of extracellular signalling proteins that regulate

The invention relates to novel polymer conjugates of hedgehog proteins which have increased bioavailability. The hedgehog proteins are conjugated to a non-naturally-occurring polymer comprising a polyalkylene

Hedgehog fusion protein is useful for the prophylaxis or CC treatment of any condition or disease state for which a hedgehog or CC patched protein constituent is efficacious and in the diagnosis of CC constituents or conditions of disease states in biological systems of CC specimens and for diagnostic purposes in non-physiological systems. Specimens and for diagnostic purposes in non-physiological systems. CC Hedgehog fusion protein is useful for treating neurological conditions due to injury, aging of nervous system, including Alzheimer's disease, chronic neurodegenerative diseases of the nervous system, including Parkinson's disease, Huntington's chorea, amylotropic lateral sclerosis and chronic immunological diseases of nervous system including multiple cand chronic immunological diseases of nervous system including multiple sclerosis and malignant gliomas, medulloblastomas, neuroectodermal tumours which express the receptor for the protein. The present sequence is human oligonucleotide HOG-799 used to construct phMC22, pMMC23, pMMC25 and pMMC26 plasmids which are used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

glycol group, with the proviso that the polymer is not conjugated to the N-terminus, or to lysine residues of the hedgehog protein. The hedgehog protein used in the conjugate may be a wild-type or mutant Sonic hedgehog (Shh), Indian hedgehog (Ihh) or Desert hedgehog (Dhh) protein, or may be a hedgehog fusion protein. The invention also relates to methods of

or may be

WPI; 2001-049927/06.

cc defining and mapping functionally important regions of a protein by cc modifying accessible amino acid side chains, and determining the effect cc the position and/or type of modification have on the activity of the protein. The hedgehog polymer conjugates may be used in the management of cc inflammatory and autoimmune diseases, and cancers. In particular, they cc may be used to prevent preventing or ameliorate neurological diseases, and cisease, and cisease, Alzheimer's cc disease); age-associated neurological disease, Alzheimer's cc disease); stroke; and malignant disease, meurological injury and ctrauma; immunological diseases of the nervous system (e.g., multiple cc sclerosis); stroke; and malignant gliomas, meduloblastomas and cc may result in increased half-life, altered tissue distribution (such as cc an improved ability to stay in the vasculature for longer periods of cc time), increased stability in solution, protection from proteolytic degradation, or reduced immonogenicity. In particular, the ability to remain in the vasculature for prolonged periods may allow a hedgehog protein of the invention to cross the blood-brain barrier, and an cc increased thermal stability would be an advantage when formulating the human sonic hedgehog mutagenic primer used in an exemplification of the invention of the constants of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          QΥ

CC which have increased bioavailability. The hedgehog proteins are conjugated to a non-naturally-occurring polymer comprising a polyalkylene CC conjugated to a non-naturally-occurring polymer is not conjugated to the CC glycol group, with the proviso that the polymer is not conjugated to the CC quyon with the proviso that the polymer is not conjugated to the CC quyon with the proviso that the polymer is not conjugated to the CC quyon with the proviso that the polymer is not conjugated to the CC quyon must be provided to the protein used in the conjugate may be a wild-type or mutant sonic hedgehog (Ihh) protein. The invention also relates to methods of CC a hedgehog functionally important regions of a protein by CC a hedgehog functionally important regions of a protein by CC anish and accessible amino acid side chains, and determining the effect CC various medical conditions including various neurological disorders, CC various medical conditions including various neurological disorders, CC disorders (e.g., Parkinson's diseases, and cancers. In particular, they come be used to prevent preventing or ameliorate neurodegenerative cC disorders (e.g., Parkinson's diseases, Huntington's disease, Alzheimer's CC disease); servesociated neurological disease; neurological injury and CC trauma; immunological diseases of the nervous system (e.g., multiple colleges of the protein (e.g., multiple colleges); increased thalf-life, altered tissue distribution (such as an improved ability to stay in the vasculature for longer periods of cc main in the vasculature for protection from proteolytic degradation, or reduced immunogenicity. In particular, the ability to crease in of the jovention to cross the blood-Prain barrier, and an and an order protein of the protein Modified hedgehog protein, useful in the treatment of Parkinson's disease and Huntington's chorea, comprises a polymer containing a polyalkylene glycol group linked to any residue other than the protein of the invention to cross the blood-brain barrier, and an increased thermal stability would be an advantage when formulating the hedgehog protein in powder form. The present sequence represents a human Sonic hedgehog mutagenic primer used in an exemplification of the Example 6; Page 77; 157pp; English. N-terminal and lysine residues

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to hedgehog fusion proteins. Hedgehog proteins are a family of extracellular signalling proteins that regulate various aspects of embryonic development both in vertebrates and in invertebrates. Hedgehog fusion protein is useful for the prophylaxis or treatment of any condition or disease state for which a hedgehog or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 1; Page 62; 178pp; English.
